December, 1985

TO: MANITOBA BEEF PRODUCERS

Dear Friends:

Welcome to the tenth year of operation for Manitoba's Young Beef Sire Progeny Proving Program (PPP). Over the last nine years, the program has drawn on solid support throughout the province. Last year, the program enjoyed its most successful year yet, in terms of herd enrollment and cow numbers.

PPP hopes to build on this success in 1986 by offering Manitoba beef producers an outstanding selection of test and reference sires. Five new test sires will be offered, including for the first time a Blonde d'Aquitaine bull. In addition, four test sires from previous years will be available. These bulls have all demonstrated superior growth characteristics, as evidenced by placing in the top ten percent of their breed for the selection criteria required by PPP. The 1986 Reference Sire list contains some truly outstanding bulls. In many instances, you will find these bulls listed in the top ten percent of their respective breeds, as evaluated through the National Sire Monitoring Program.

Enclosed you will find detailed information on individual test and reference sires, as well as a summary of the program's results and enrollment procedures.

Plan now to put PPP to work for you. PPP offers you a selection of bulls and breeds that have the genetics to produce those extra pounds of beef which will increase your dollar returns. Performance information in exchange for free semen is all that is asked.

I look forward to working with you on the "Triple P" program. If you have any questions, feel free to contact me at the above address or phone: 945-7691.

Yours truly,

John McKinnon

John McKinnon
Beef Program Specialist

JMcK:dm

Manitoba's "Triple P" Program — a national leader in beef sire evaluation

PPP is Manitoba's Young Beef Sire Progeny Proving Program. Initiated in 1976 by Manitoba Agriculture in consultation with the Manitoba Beef Cattle Performance Association, the 1986 breeding season will mark PPP's tenth year of operation. Since its inception, the primary aim of PPP has been to identify Manitoba's genetically superior young purebred beef sires.

PPP is the third in a series of performance testing programs offered by Manitoba Agriculture. In association with Federal-Provincial ROP Home-Herd Testing and post-weaning evaluation at seven bull test stations, PPP offers Manitoba beef producers the opportunity to significantly improve the genetic performance of their herd.

As indicated by its name, PPP is a progeny testing program. Test sires are evaluated through the performance of their offspring. To be eligible for the program, test sires must meet rigid selection criteria. They must:

- be born and raised in Manitoba
- have a complete set, birth to weaning of ROP home-test data
- have completed testing at one of Manitoba's bull test stations and have placed in the top ten percent of their breed (minimum of 30 contemporaries) for a combined index of weight per day of age (WPDA) and average daily gain (ADG)
- meet minimum scrotal circumference measurements and have, in the opinion of the selection committee, a reasonable birth weight
- meet breed conformation standards and pass health and reproductive examinations

PPP evaluates test sires by comparing the performance of their progeny to the performance of progeny from nationally proven reference sires (on a within-herd and provincial basis). Data is collected on all PPP sired calves through the Federal-Provincial ROP program. Calves are evaluated from birth to yearling age for calving ease, birth weight, weaning weight and yearling weight. This information is used by Agriculture Canada through the National Sire Monitoring Program to generate progeny proofs on the PPP test sires.

A progeny proof is a very useful tool which a breeder can utilize to estimate the genetic worth of a bull. A progeny proof evaluates three traits. These are: calving ease, gain to weaning and gain to yearling. To illustrate how a progeny proof works, consider the results of the PPP program to date. Thirty-six bulls (representing six breeds) have been offered as test sires. Of these, 27 have received complete or partial proofs. The following table illustrates the type of proofs obtained on these bulls over the last five years.

Table 1.

Trait	Year					
Calving Ease	1980	1981	1982	1983	1984	1985
No. of bulls with proofs	7	9	7	14	15	17
No. breed average or better	4	8	6	11	14	13
Gain to Weaning						
No. of bulls with proofs	8	12	15	22	20	20
No. breed average or better	7	10	11	14	13	9
Gain to Yearling						
No. of bulls with proofs	8	12	12	21	18	17
No. breed average or better	7	8	9	16	13	8

To illustrate how a progeny proof works, consider the 1980 Hereford test sire - Britisher B Marquis 11K, bred and owned by Hay's Herefords of Pipestone, Manitoba. Table 2 illustrates his most recent progeny proof.

Table 2.

Sire Name	Reg. No.	Tattoo	Calving Ease	Weaning Weight	Yearling Weight
Britisher B Marquis 11K	1787497	MYZ 11K	+ 1	+ 6	+11

For calving ease, this bull has a Predicted Difference (PD) of +1. This indicates he is above breed average for calving ease. For the Hereford breed, a zero proof means you can expect 82% and 97% unassisted calvings with two-year-old heifers and five-year-old (or older) cows (covering all breeds of dam) respectively. A negative proof indicates that compared to the average Hereford bull, you can expect an increased incidence of calving problems. On the other hand, a positive proof means an easier calving bull.

The weaning and yearling weight proofs are interpreted a little differently. They are expressed in pounds of gain from birth to weaning or birth to yearling. A producer using Britisher B Marquis 11K with a +6 in the PD column for weaning weight, can expect calves from this bull to gain six pounds more on average than calves from a bull of the same breed with a PD of zero. A +11 in the PD column for yearling weight can be interpreted similarly.

Further evidence of the quality of PPP test sires can be found by looking at the performance of their sons at Manitoba's bull test stations.

Table 3.

Year	No. of Progeny	ADG Index	WPDA Index
1979	17	105	104
1980	25	107	105
1981	20	106	104
1982	17	94	98
1983	17	106	103
1984	19	104	103
1985	14	106	103

For six of the past seven years, progeny from PPP test sires have consistently outperformed their contemporaries at the station.

One of the most important benefits of PPP is the length of time it takes to receive a proof on a test sire. Normally, it takes seven to eight years to obtain a proof on a bull. Through PPP, a proof can be obtained in two to three years. Identification of superior bulls at three to four years of age provides the opportunity for widespread usage throughout the province.

In addition to identification of superior bulls, PPP performs one other very important function. It provides both commercial and purebred breeders with the use of top performance tested bulls and an accurate method of measuring herd performance. To date, approximately 10,000 cows have been bred to PPP test and reference sires. Utilization of PPP semen throughout the province represents a major improvement in the breeding program of the cooperating cow herds. Top performing bulls are utilized which might be otherwise unavailable or unaffordable. A sound breeding program which incorporates PPP will have a lasting effect on the genetic performance of the herds involved.

Plan now to cash in on the superior gains offered through PPP. Complete information on the 1986 test and reference sires is available in this booklet.

ENROLLMENT REGULATIONS

What are the requirements for enrollment in the program? Herds must be located in the Province of Manitoba. Commercial or purebred females (or any combination of both) are accepted. A minimum of 12 females must be enrolled. Maximum enrollment is limited to 100 cows. Cow numbers may be limited further if reference sire semen is in short supply. Cow herd owners must use artificial insemination, pay insemination costs and enroll on the Federal-Provincial ROP Beef Cattle Herd Improvement Program. Semen is provided free of charge in exchange for performance information on PPP-sired calves.

The following is a breakdown of the PPP Cow Herd Owner Agreement.

YEAR 1

- Semen is distributed by the Manitoba Semen Distribution Centre.
- A maximum of two breedings per cow is allowed.
- Cows must be bred to test and reference sires in a random order.
- Breeding season must be restricted to 90 days.
- When breeding is complete, unused semen is returned.

YEAR 2

- Collect birth information (Calving Ease scores are particularly important to the program).
- Collect weaning weights and record on ROP records.

YEAR 3

- Record yearling weights and mail in completed ROP records.

Agreement is completed.

Application forms can be found at the back of this booklet. Send completed applications to Beef Program Specialist, Manitoba Agriculture, 545 University Crescent, Winnipeg, Manitoba, R3T 2N2.

1986 PPP TEST SIRES

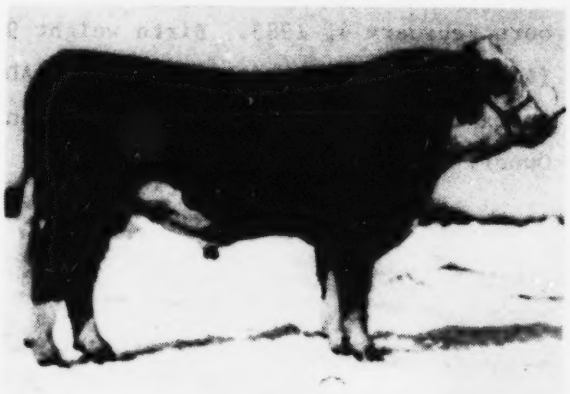
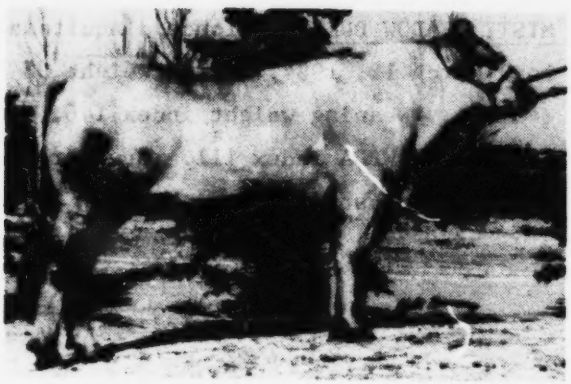
Semen from ten outstanding young Manitoba bulls, in exchange for complete performance data on their offspring, is now available to cattle producers for 1986. Semen will be distributed through the Manitoba Young Beef Sire Progeny Proving Program (PPP).

BFL SIM MODE 76S Polled Hereford, born April 15, 1984. Birth weight 90 lbs. (41 kg). Weaning weight index 117, ADG index 120, WPDA index 114. Breeder, Batho Farms Ltd., Oak Lake, MB. Owner, D. Bamford, Foxwarren, MB.



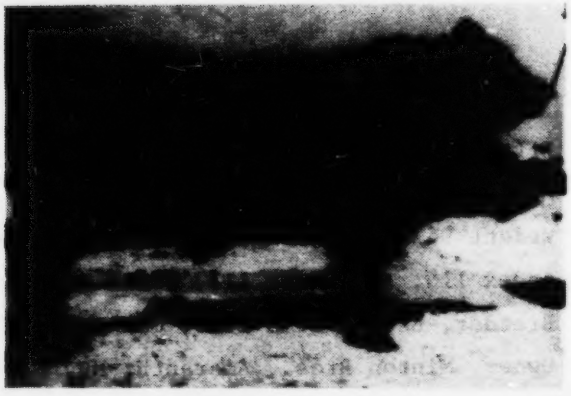
BFL Klondike Lad 14M 64R Polled Hereford, born April 6, 1983. Birth weight 95 lbs. (43 kg). Weaning weight index 115, ADG index 118, WPDA index 109. Breeder, Batho Farms Ltd., Oak Lake, MB. Owner, Minton Bros., Amaranth, MB.



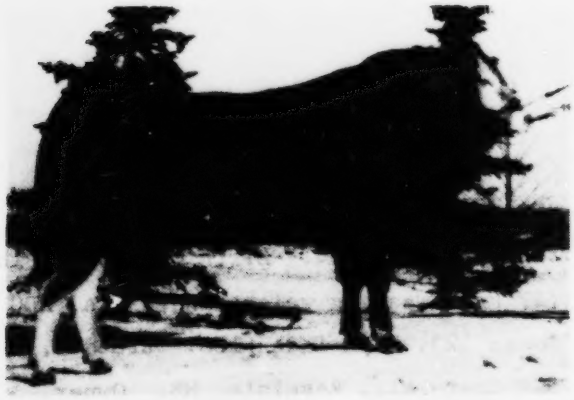
SGF Jaguar Power 69S Charolais, born February 24, 1984. Birth weight 103 lbs. (47 kg). Weaning weight index N/A, ADG index 123, WPDA index 108. Breeder, SGF Charolais, Roseisle, MB. Owner, E. Geddes, Pilot Mound, MB.

1986 PPP TEST SIRES

RED WP CURRENT VALUE 98S Red Angus, born April 8, 1984. Birth weight 72 lbs. (33 kg). Weaning weight index 106, ADG index 117, WPDA index 108. Breeder, W. P. Ranches, Winnipeg, MB. Owner, Wayne Heape, Oak Lake, MB.

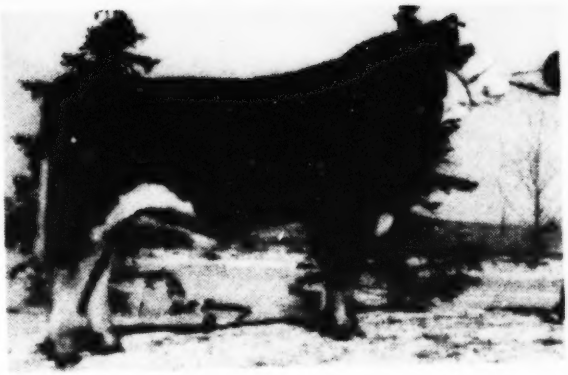


RED TAG-A-LONG PANHANDLER 34R Red Angus, born February 4, 1983. Birth weight 97 lbs. (44 kg). Weaning weight index 123, ADG index 130, WPDA index 130. Breeder and Owner, C. Simpson, Brookdale, MB.



MISTY MEADOW DUKE Blonde d'Aquitaine, born March 12, 1984. Birth weight 98 lbs. (45 kg). Weaning weight index 146, ADG index 114, WPDA index 111. Breeder and Owner, Tom Busby, Reston, MB.

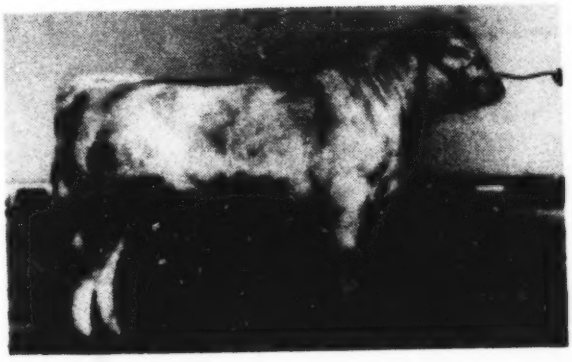
1986 PPP TEST SIRES



DZC MAJESTIC LAD Simmental, born February 8, 1984. Birth weight 100 lbs. (45 kg). Weaning weight index 104, ADG index 110, WPDA index 110. Breeder, Thiessen Stock Farms, Cromer, MB. Owner, Wilmot Milne, Gladstone, MB.

PNE LENARD 92R Simmental, born April 6, 1983. Birth weight 92 lbs. (42 kg). Weaning weight index 102, ADG index 126, WPDA index 119. Breeder, PNE Simmental Farms, Russell, MB. Owner, D. Pearson, Miami, MB.

CAVELOCK'S 6N Maine Anjou, born February 26, 1981. Birth weight 90 lbs. (41 kg). Weaning weight index 98, ADG index 116, WPDA index 107. Breeder, Cavelock Maine Anjou, Neepawa, MB. Owner, Dale Davison, Miniota, MB.



KENMAR LANCER 58L Shorthorn (Polled), born March 13, 1979. Weaning weight index 115, ADG index 121, WPDA index 120. Breeder, Harvey Fulton, Birtle, MB. Owner, Ken & Chris Waddell, Arden, MB.

YOUNG BEEF SIRE
PROGENY PROVING PROGRAM
1986 PPP REFERENCE SIRES

Please note:

You may use any Reference Sire not included in this summary subject to the following conditions:

1. The selected Reference Sire must have a complete progeny proof listed in the National Sire Monitoring Program Summary.
2. The herd owner pays the cost of such semen and any signing fees required. (PPP offers free semen only for the Reference Sires in the enclosed).

If you select a special Reference Sire, check with this office for approval.
